
A GBD modelled burden by sex
Age-standardised rate per 100,000
male excess ≈ 3·4–4·8× throughout 1990–2023
217·9
63·3
GBD male ASIR
GBD female ASIR
Year
B Divergence in sex structure
Male ÷ female ratio
3·44 : 1
3·6×
GBD (model)
NNDRS reported, 2014–2019
NNDRS reported, single years
0·86–0·96 : 1 (2014–2019)
1·10 : 1 (2025)
Year
C Age-specific rate, 2020
Rate per 100,000
GBD modelled incidence
NNDRS notified rate
352·4
GBD assigns zero incidence at 65 years and above
NNDRS peak: 85+ y 90·4
44·4
Age group (years)
D Model-to-notification ratio by age
Ratio (GBD ÷ NNDRS)
GBD ÷ NNDRS
model overestimates young adults 2–10×
underestimates from 60 y upward (0 at 65+)
Age group (years)
